

SERVERware

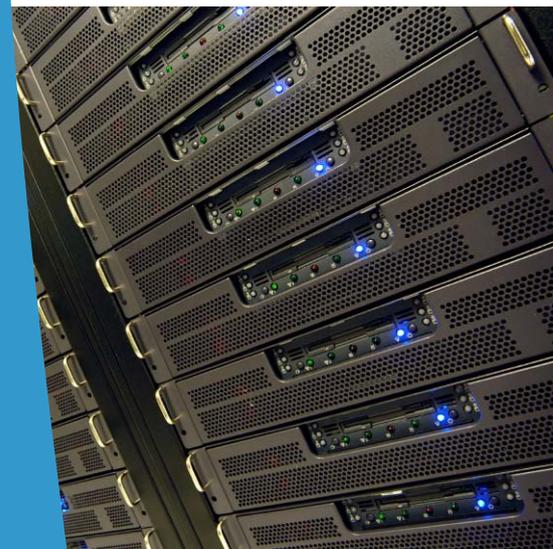

Cloud IP services delivery platform

SERVERware

SERVERware is a next generation communication technology solution.

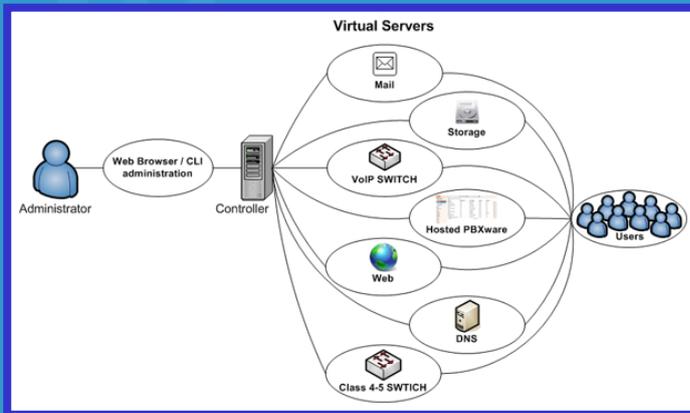

- Delivers a wide range of IP services and applications.
- It is redundant, high available and fault tolerant.
- It features comprehensive management, flexibility, self healing and an unlimited scalability of host and virtual servers.

SERVER EDITION

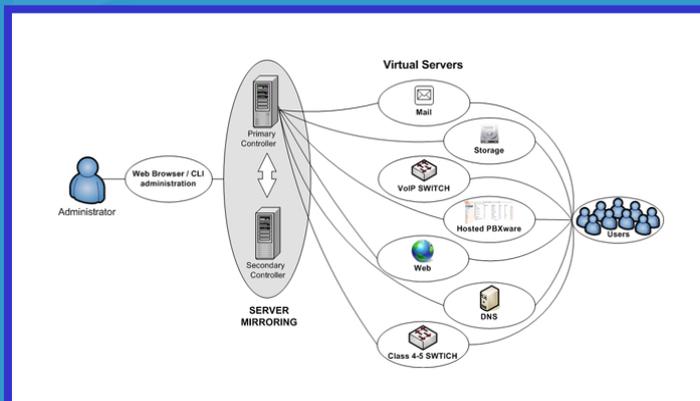

The Server Edition of SERVERware is the most economical way to start delivering IP Service from a single server. This edition includes all of the necessary components to allow Service Providers to offer any of the supported VPS templates with a clear path upgrade to Network Edition.

Non-Redundant Mode:

The Server Edition of SERVERware can also be deployed with local hardware redundancy to provide high availability should the primary server fail. This uses Server Mirroring and provides fast failover and high uptime.

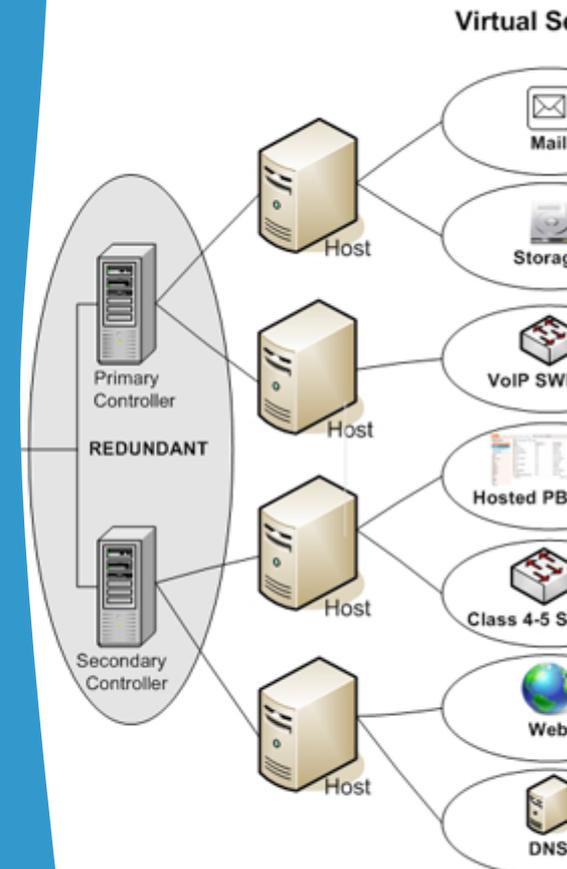

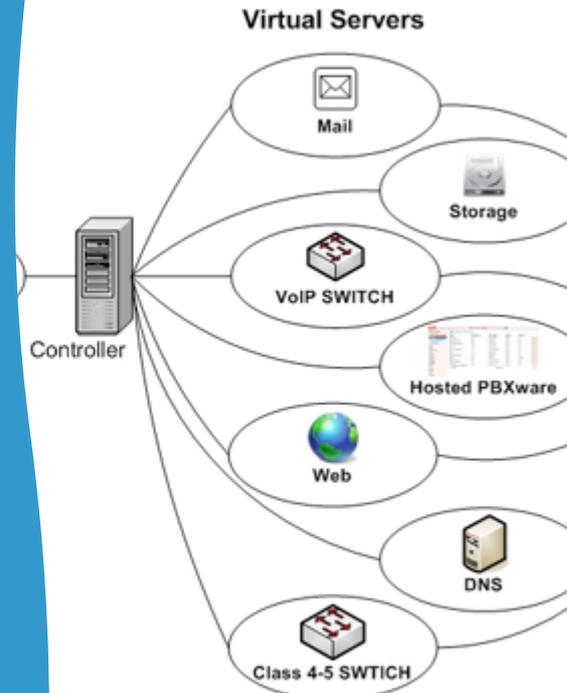

High Availability Mode:

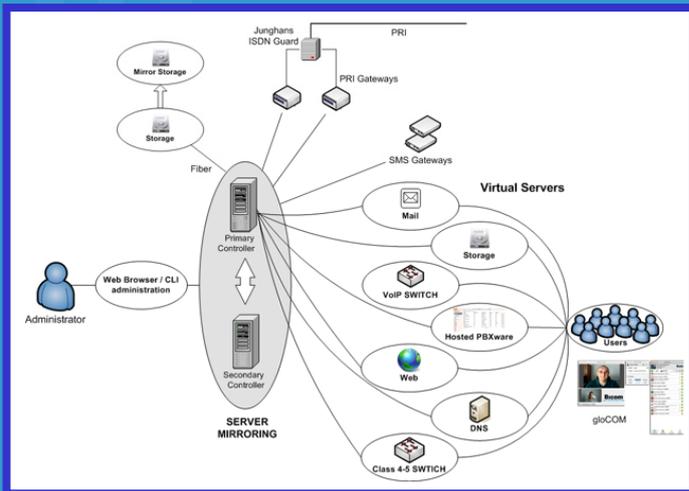

The redundancy above is shown again below, but as part of the whole network. Note the use of the Junghanns ISDN

SERVERware

Editions

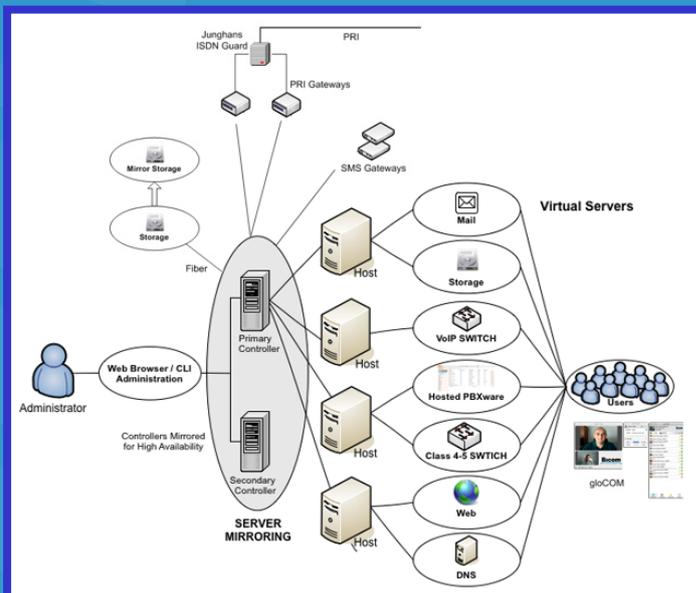

Guard so that E1/J1/T1s are also rolled over if interface cards are inserted in the Control Units. The ISDN Guard will default to Primary should it fail or lose power.

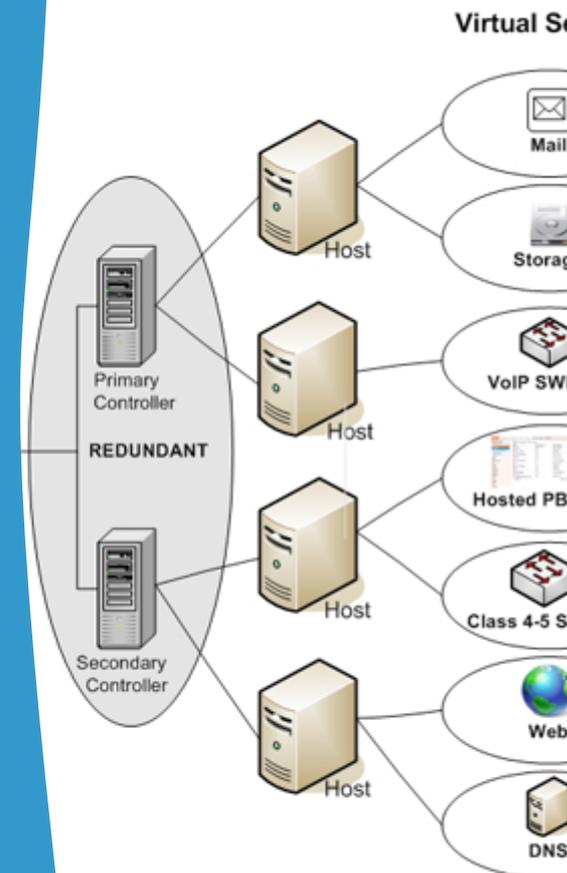

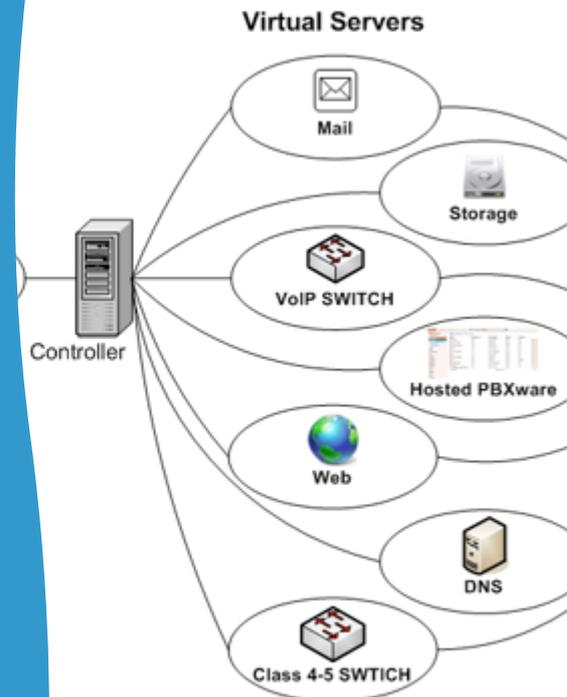

NETWORK EDITION

The network edition of SERVERware contains up to 256 host servers, creating a farm of virtual private servers from which the IP service delivery platform is served. This allows Service Providers to offer redundant, flexible, and scalable IP services like mail, web, hosted PBXes etc.

NGN SOLUTION

- SERVERware is a next generation communication technology solution.
- Delivers a wide range of IP services and applications.
- It is redundant, high available and fault tolerant.
- It features comprehensive management, flexibility, self healing and an unlimited scalability of host and virtual servers.

MANAGEMENT

- Command line and Web Interface management.
- Add, edit, remove Hosts and VPSes.
- Role Based Administration.
- Multi Network Administration.

MONITORING

- Network resources, hosts and servers monitoring.
- System load, CPU usage, memory status, file system usage and bandwidth utilization monitoring.

HIGH AVAILABILITY FEATURES

- Virtual servers duplication.
- Storage duplication and backup
- Self Healing/Redundancy.
- Controller Mirroring.

Vision Statement

We Unify Communications

Mission Statement

We provide the Communication World with the most Complete Turnkey Communication Systems available by Creating, Unifying and Supporting the Most Advanced of Current Technologies.

Overview

Bicom Systems was the first company to deliver Open Source Communications Software as Professional Turnkey Solutions.

By combining the best of open source telephony and its own proprietary software, Bicom Systems can provide enterprises with turnkey solutions that take account of the clients' exact needs within a very cost-effective framework - giving CIOs the safest choice. This mix includes royalty-free software, vibrant open source communities, available custom development backed up by accountable, professional support services.

The company finds innovative open source communication projects and professionalizes the project by creating, unifying and supporting turnkey systems with its proprietary in-house software. Bicom Systems provides the resources, core development and support services to enable popular open source projects to scale into enterprise-class communications software.
